

Job Description

Introduction

Join the **Manlitics** team as a Database Administrator, contributing to our **Quote Process** by providing accurate counts from database and alternative data sources, based on specifications aligned with B2B industry standards.

Your Role and Responsibilities

- Communicate effectively via email with the Customer Success team to understand requirements and share deliverables.
 - Analyze specifications provided by the Customer Success team and **deliver accurate database counts**.
 - Propose alternative data solutions when filters or criteria limit data availability.
 - Able to handle and process large datasets efficiently, ensuring data accuracy and completeness.
 - Provide data information from the database & other data sources.
-

Required Technical and Professional Expertise

- Proficient in **Microsoft Excel** and other MS Office tools.
 - Strong knowledge of **SQL**, specifically with **PostgreSQL**.
-

Preferred Technical and Professional Experience

- Experience in the **B2B lead generation** industry.
- Familiarity with data specifications, job levels, job functions, industries, and terms such as **TAL** and **LAL, etc.**
- Skilled in applying data filters and segmentation according to customer specifications.
