

Job Description

Job title: System Administrator
Location: Hinjewadi, Pune
Terms: Permanent, Full time.
Salary/rate: -

About us:

Join Manlitics, where tradition meets innovation! We're hiring individuals passionate about cutting-edge solutions, data insights, and performance-based lead generation. Be part of our team, leveraging our unique H+MaaS platform to shape the future of marketing with a blend of creativity and technology. Make your impact at Manlitics!

About the role:

As a System Administrator at Manlitics, you will be a vital member of our IT team, responsible for the overall maintenance and performance of our computer systems. This role presents an exciting opportunity to manage and optimize our IT infrastructure while ensuring the security and reliability of our systems. If you have a strong background in system administration and enjoy tackling complex technical challenges, we invite you to join our dynamic team.

Responsibilities:

- Provide **technical support** to end-users (on-site and remote), troubleshooting issues related to hardware, software, networks, printers, and mobile devices.
- Install, configure, and maintain **workstations, laptops**, and peripherals across Windows and macOS environments.
- Set up and manage **user accounts**, access controls, email, and permissions via Active Directory and Microsoft 365.
- Monitor, maintain, and support **servers**, including patch management, backups, and performance tuning.
- Configure and support **network infrastructure**, including switches, firewalls, Wi-Fi, and VPN connectivity.
- Deploy and manage software applications and updates across user devices and servers.
- Handle routine tasks such as system updates, user onboarding/offboarding, and device inventory management.
- Maintain and update documentation for systems, procedures, and support processes.

- Ensure compliance with **security protocols**, including antivirus management and regular vulnerability assessments.
- Provide training and guidance to users on IT policies, security awareness, and basic troubleshooting.

Required Skills & Experience:

- 1 year of experience in a combined desktop support/system administration role.
- Strong knowledge of **Windows Server**, Active Directory, Group Policy, and Microsoft 365.
- Proficiency in supporting end-user devices running **Windows and macOS**.
- Familiarity with **network troubleshooting**, TCP/IP, DNS, DHCP, and VPN.
- Experience with backup solutions and system recovery procedures.
- Strong problem-solving skills and a customer-focused mindset.
- Excellent communication and interpersonal skills.

Good to Have:

- Experience managing **GoDaddy domains and hosting**, including DNS configuration and SSL certificates.
- Familiarity with managing **SaaS subscriptions and software licensing** (e.g., Microsoft 365, antivirus, etc).
- Exposure to **website management** basics (e.g., WordPress, cPanel).

Preferred Qualifications:

- Bachelor's degree with required experience.
- Experience with virtualization platforms such as VMware or Hyper-V.
- Exposure to scripting and automation using PowerShell or Bash.
- Familiarity with endpoint security/management tools, especially Sophos.
